Hanai N, Shitara K, Nakamura ζ, Niwa Ø

WPI; 2001-266143/27.

New human type complementation-determining region-transplanted antibody and derivatives against ganglioside GD3, useful in diagnosis and therapy of e.g. tumors, with low antigenicity, little side effects but potent

activity in cancer.

Claim 10; Page 173-174; 183pp; Japanese.

The present invention describes a monoclonal antibody which can react specifically with ganglioside GD3. The antibody and its derivatives are useful in the diagnosis and therapy of tumours, particularly cancer diagnosis. The present sequence is a protein used in the exemplification of the invention

Sequence 119 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes drugs contain a genetically-modified antibody against ganglioside GD3 or its fragment and at least 1 of a substance capable of activating immunocompetent cells and a substance having an antitumor activity in combination. The drugs can be used to treat tumour like melanoma and can provide a treatment with enhanced therapeutic effect and little side-reactions, particularly to relieve problems of side-effects during the conventional single administration. This sequence represents a protein associated with the anti- ganglioside GD3 antibody

                                                                                                                                                                                                                                                                                                                                                       The sequences given in AAR33256-57 represent rat heavy and light chain variable regions respectively. The DNA sequences encoding these proteins were used in the construction of humanised chimeric antibody expression vectors. In these humanised antibodies none of the amino acids of the non-human animal Ab variable region have been changed. (Updated on 25-WAR-2003 to correct PN field.)

The base sequences of the Ig variable regions in KM641 H chain cDNA (pKM641HA3) and KM641 L chain cDNA (pKM641LA2) are given in AAQ45438-39. A KM641-derived chimeric human Ab H chain expression vector was constructed by joining the H chain variable region gene from pKM641HA3 to a vector for chimeric human Ab H chain expression using the synthetic DNAs given in AAQ63439 and AAQ63440
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Humanised cytocidal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Key
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Murine immunoglobulin heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           no methionine initiation codon and the leader sequence was partly lacking. The chimeric human antibodies are useful in the treatment of cancer, especially that which is of neural ectodermal origin. In contrast to prior art constructs based on mouse monoclonal antibodies, the chimeric human antibodies do not cause anti-mouse immunoglobulin production. The chimeric human antibodies human antibodies have a prolonged half-life and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New humanized chimera antibody KM-871 useful for treating cancer, comprises variable region of mouse monoclonal antibody, reactive with ganglioside and human antibody constant region.
   The present invention describes a monoclonal antibody which can reac specifically with ganglioside GD3. The antibody and its derivatives useful in the diagnosis and therapy of tumours, particularly cancer diagnosis. The present sequence is a protein used in the exemplifica of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antibodies as they do not provoke a reaction in the human and side effects, such as the formation of anti-mouse immunoglobulin antibody the rapid half-life of the immunoglobulins, do not occur
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a murine immunoglobulin heavy chain variable region from plasmid KM-641. The coding sequence was used in the creation of an expression vector, along with the sequence for a human antibody, to produce humanised chimaeric antibodies, which can be used to treat cancer. Humanised chimaeric antibodies are more effective than mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 14;

                                                                                                                                                                                                                                                                                                                                                    The invention describes drugs contain a genetically-modified antibody against ganglioside GD3 or its fragment and at least 1 of a substance capable of activating immunocompetent cells and a substance having an antitumor activity in combination. The drugs can be used to treat tumo like melanoma and can provide a treatment with enhanced therapeutic effect and little side-reactions, particularly to relieve problems of side-effects during the conventional single administration. This seque represents a protein associated with the anti- ganglioside GD3 antibod
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Drugs containing genetically-modified antibody against ganglioside GD: its fragment, immunocompetent cell activators or/and antitumor agents combination, applicable in treating malignant tumor like melanoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mus musculus

                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a monoclonal antibody which can reac specifically with ganglioside GDJ. The antibody and its derivatives useful in the diagnosis and therapy of tumours, particularly cancer diagnosis. The present sequence is a protein used in the exemplifications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human type complementation-determining region-transplanted antibody and derivatives against ganglioside GD3, useful in diagnosis and therapy of e.g. tumors, with low antigenicity, little side effects but potent
                                                                                                                                                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
Best Local :
The present invention describes a monoclonal antibody which can react specifically with ganglioside GD3. The antibody and its derivatives are useful in the diagnosis and therapy of tumours, particularly cancer diagnosis. The present sequence is a protein used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes drugs contain a genetically-modified antibody against ganglioside GD3 or its fragment and at least 1 of a substance capable of activating immunocompetent cells and a substance having an antitumor activity in combination. The drugs can be used to treat tumour like melanoma and can provide a treatment with enhanced therapeutic effect and little side-reactions, particularly to relieve problems of side-effects during the conventional single administration. This sequence represents a protein associated with the anti- ganglioside GD3 antibody
                                                                                                                                                                                                      New human type complementation-determining region-transplanted antibody and derivatives against ganglioside GD3, useful in diagnosis and therapy of e.g. tumors, with low antigenicity, little side effects but potent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ganglioside;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ganglioside

                                                                                                    Query Match
                                                                                                                                                      the usual hybridoma techniques. The coding sequence for the variably region can be used to generate humanised variants, especially by mutagenic PCR. CD6 has been shown to be expressed in T lymphocytes involved in the inflammatory infiltration of the skin in psoriasis. anti-CD6 MAb can therefore be used to diagnose and treat psoriasis.                                       The invention relates to a novel monoclonal antibody having the identifying characteristics of, or that is a monoclonal antibody 14F3. An antibody of the invention has osteopathic, antirheumatic, antiarthritic, antiinflammatory, cyrostatic, antipsoriatic, antidiabetic, and neuroprotective activity. The polynucleotides encoding the antibodies of the invention may have a use in gene therapy. The antibodies and polypeptides are useful for treating or preventing osteopathic diseases, such as rheumatoid architis, osteoporosis, metastatic and primary bone cancer, wear debris induced osteolysis or osteoarthritis, and immune diseases such as psoriasis, insulin-dependent diabetes, inflammatory bowel disease or multiple sclerosis. The present sequence represents the heavy chain variable region of the murine monoclonal antibody 14F3 of the invention. The sequence contains three complementary determining regions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mouse; monoclonal antibody; 14F3; osteopathic; antirheumatic; antiarthritic; antinflammatory; cytostatic; antipsoriatic; antidiabetic; neuroprotective; gene therapy; rheumatoid arthritis; osteoporosis; bone cancer; osteolysis; osteoarthritis; immune disease; psoriasis; insulin-dependent diabetes; inflammatory bowel disease; multiple sclerosis; heavy chain variable region;
                                                                                                                                                                                                                                                                                                     New monoclonal antibody having the characteristics of a monoclonal antibody 14F3, useful for treating or preventing osteopathic diseases, e.g. rheumatoid arthritis, or osteoporosis, and immune diseases e.g.
                                                                                                                                                                                                                                                          Disclosure; Page

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of a fusion protein comprising: a PelB CC leader; a single chain FV (scFV) derivative of antibody 198/B1 comprising CC the heavy (VH) and 11ght (VL) chain variable regions of 198/B1 comprising CC an artificial, flexible linker paptide; a spacer; a Myc-tag peptide; a CC spacer; and a C-terminal GHIs affinity tail 198/B1 is an example of anti-cc chaman Factor IX (FIX)/activated Factor IX (FIXA) antibodies of the CC invention. Anti-FIX/FIX antibodies and their derivatives, including scFv CC fragments, have FVIIIa cofactor activity or FIXA activating activity. CC Administration leads to an increase in the procoagulant activity of FIXA, CC even in the presence of FVIIIA inhibitors. This allows for rapid blood CC coagulation even in the absence of FVIII or FVIIIA, and in the case of CC FVIII inhibitor patients. The antibodies and derivatives are used in a CC claimed pharmaceutical composition for treating patients with blood CC coagulation disorders, especially haemophilia A and haemorrhagic CC diathesis. The scrivity crag fusion was expressed in E. coli. It exhibited CC FVIII-like activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
